Award winning and top ranked!

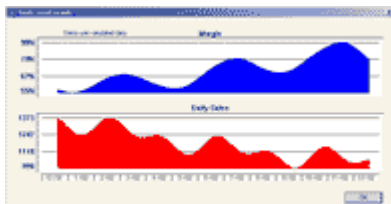

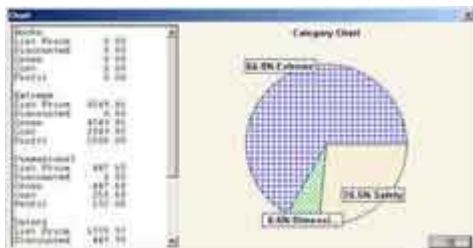

With one button view 'Sales by Hour'. A bar chart graphing total sales grouped by the hour of day.

Simple one button view of 'Sales by Hour of Week'. A graph of total sales grouped by the hour of the Week. This can assist manpower planning and hours of operation efficiency.

The 'Twelve Month Trend Graph' gives a wide perspective of profit margins and sales. Want to increase margins and see how it affects sales. It's as easy as one button.

Information is the key to our new version. Sales are listed by Year, Month, Day, Hour, Salesperson, Cashier, Vendor, Category or Customer. Find who, where, and when your sales are at their highest and lowest. Other reports give detailed breakdowns of every product by a Vendor or Category. See the cost, profit and sales in detail with a single click. Find out who's the top salesperson at a glance. What's the best cities or zip codes? Instantly find out if products are being sold below your set margins. Our POS software gives the power to you, the power to run your business at top efficiency.

Versatile and cost-effective point-of-sale solution for businesses.

Network Compatible

Restaurant POS Network works with all networks. Connect as many registers as you need. Maintain a single inventory with password security allowing only the manager access to reports and price changing. Simple and easy to connect. Nothing to register or program; as simple as opening a file. POS Network provides the network access and manager tools.

Touch Screen / Scanner

Touch screen and Bar code scanner use for the simplest operation. No other pos retail software is as simple to use.

Scanner / Keyboard

Scanner and Keyboard use for mouse less operation. Quick and easy point of purchase capture without having to use a mouse.

Low Margin Warning

Turn on 'Low Margin Warning' and POS will check every sale for items selling below your settings and warn the operator. Want to know where the money went? Search previous sales for items falling below your margin settings.

Re-Order Estimator

POS will estimate how much to re-order based on past sales. This will help with cash flow by reducing your excess inventory.

Process Sales

Quick and Easy sales processing with automatic markdowns or on the fly percentage mark downs. Sales tax, discounts, shipping and handling charges. Bar code entry, item number entry or on the fly entry.

Quality Service

We believe in our products and stand by them. Buy with the confidence that your getting exactly what you want and with a company that will be there when you need us.

Inventory Control Management

Inventory Control Software: inventory tracking by Vendor, Low Quantity, Description or Category.

Track Sales History

Sales summaries by Time, Cashier, Customer, Vendor or Products.

Customer Categories

Customers can be assigned a category, such as Wholesale, Retail, Employee. Each category can have it's own discount rate and tax rate.

Customer Information

Optionally collect customer information.

One Button Sales Totals

With one button find out today's / yesterdays sales, this/last week, this/last quarter, or this/last year.

On the Fly Inventory Entry

Add to your inventory database quickly and easily all at once or on the fly with pop open easy access windows.

Cash Drawer Reconciliation

Fast and accurate drawer totals with simple counting and itemized payment categories.

Common Questions	Uncommon Answers
Compatible with...	Yes, our windows POS software is compatible with most modern POS equipment!
Technical support.	We have the best technical support by email, AIM and phone. You will be surprised at how fast we respond and resolve your questions. We are here to assist you with your questions!
Can you change this...	We make small changes, customization, larger changes or even complete custom additions. Just ask us. You'll be pleased with how fast and fair our quotes are!
How long?	You will receive your software usually with-in an hour. As soon as we receive notice of payment, we email it to you. You will also receive service updates for free for 6 months.
Your software is so compact?	The real question is how can theirs be so large? We don't use VB (Visual Basic), Java or other fine languages that were intended for other purposes. We only use native code compiled languages, usually C++ that produce fast and compact code. We don't put in a lot of useless pictures and icons take up megabytes of memory!
